Introduction

The Workshop on Model Integrated Mechatronics aims to assemble experts, colleagues and PhD students in the field of modeling mechatronic systems in the Industrial automation domain to present and discuss current research activities.

Mechatronic system development is influenced from two quite independent domains. On one side, semi-formal systems modeling approaches – mainly originated from successful practices in Software Engineering – are currently expanded and adapted to address current challenges in the development of complex mechatronic systems. On the other side, formal system modeling approaches are maturing to the point where they are no longer restricted to academic examples and model analysis techniques.

Currently, none of these approaches is capable of addressing by alone the challenges in the development process of today’s complex mechatronic systems. To this end, the workshop aims at bringing together prominent proponents of the two areas to foster the mutual understanding and the exchange of ideas towards the integration and synergy of methodologies, techniques and platforms used by the two worlds.

The workshop is timed to benefit from Prof. Kleanthis Thramboulidis’ stay at Saarland University in the framework of the innolecture program funded by Stifterverband für die Deutsche Wissenschaft and ME Saar.

Workshop Overview

The two-day event is composed of 14 invited talks. The first day is dedicated to semi-formal approaches and influences from the Software Engineering domain, whereas, on the second day, formal modeling approaches are presented. Two talks are presenting results from current EU projects (MULTIFORM, Avilus) related to the workshop’s subject.

Talks will be held throughout the two days in Building A5 1 on the Saarland University campus. Sessions are in room −1.03 (basement).

Everyone interested is invited to attend. Attendance of the workshop is free of charge. However, to facilitate the planning, please register by e-mail with sekretariat@aut.uni-saarland.de preferably before the holiday season.
Workshop on 
Model Integrated Mechatronics 

January 27-28, 2011 at Saarland University, Saarbrücken, Germany
